Governance that thinks.

The agent-first GRC platform for continuous governance. Compliance that acts — not just organizes.

CO-FOUNDER

Mark Syed

20 years in cyber security, technology risk, and governance across Europe and Asia. Builder turned architect turned founder.

- Government, finance, security & consulting sectors
- Design thinking approach to operational & cyber risk
- CRISC, IAPP AI Governance Professional

Based in Hong Kong

THE PROBLEM

GRC is broken.

Billion-dollar enterprises run governance on spreadsheets, disconnected tools, and manual processes designed for a slower world.

THE COST

$500K+

Annual GRC team cost per enterprise

60%

Of that time spent on coordination, not risk reduction

Weeks

To prepare for a single audit cycle

THE SOLUTION

AI agents that operate compliance.

Not chatbots. Not dashboards. Autonomous agents that implement controls, collect evidence, and monitor risk — continuously.

THREE LINES OF DEFENCE

One agent per line. Always on.

1ST LINE

Ops Agent

Implements controls, collects evidence automatically, runs self-assessments, flags gaps before auditors do.

2ND LINE

Risk Agent

Monitors risk posture 24/7, maps controls to frameworks, challenges first-line assessments, interprets regulatory changes.

3RD LINE

Audit Agent

Tests controls independently, validates evidence quality, generates audit-ready reports, provides assurance opinions.

LIVE DEMO

Upload your annual report. Watch this happen.

1	Extracted strategic priorities	15s
2	Mapped governance objectives	30s
3	Suggested KCIs with confidence scores	45s
4	Gap analysis against HKMA guidelines	60s

IBM OpenPages can't do step 1.

WHAT MAKES US DIFFERENT

Agent-first.
Not AI bolted on.

Autonomous Policy Generation

Board minutes to policy artifacts in hours. Drafts with citations and confidence scores.

Explainability by Design

Every recommendation includes sources, confidence, and reasoning. EU AI Act aligned.

Human-in-the-Loop

Configurable checkpoints. AI assists, humans decide, audit trails prove it.

Real-Time Regulatory

HKMA, MAS, and major feeds with under 24h gap analysis SLA.

Strategy-to-Metrics Lineage

Board intent to objectives to controls to evidence to logs. Complete chain.

20+ Frameworks Indexed

COBIT, NIST, ISO 27001, PCI DSS, Basel III — cross-mapped at control level.

THE MOAT

The moat isn't "using AI."

It's **governed, regulator-ready agentic execution** at the decision level.

Per-decision explainability

Rationale, sources, confidence — every time.

Challenge mechanism

Auditable human dissent and resolution trail.

Agent IAM

Purpose-built identity for autonomous agents.

Evidence by design

Artifacts produced during operation, not after.

Fail-closed operations

Agents fail safely. Silence equals reject.

3LOD-native workflows

Mirrors how regulated orgs are supervised.

Six layers. Purpose-built.

01	Unified GRC Operating Layer	Risk register · Controls · Evidence · Issues
02	Agentic Intelligence Layer	Gap analysis · Reg monitoring · KCI reasoning
03	Governance & Explainability	Virtual 3LOD · HITL · 6-layer explainability
04	AI Security & Agent Ops	Agent identity · Auth · Fail-closed states
05	Agentic Cyber Defence	Detection · Response · Threat intel · GRC linkage
06	SecurePath Integration	Connectors · Canonical mapping · Traceability

TRUST

Built for regulated industries.

HKMA and MAS sandbox aligned. ISO 42001 path. EU AI Act compliant.

COBIT 2019 | NIST 800-53 | ISO 27001 | ITIL V4/V5 | FIPS 140-3

PCI DSS | BASEL III | HKMA | MAS TRM | COSO | EU AI ACT

ISO 42001

DESIGN PRINCIPLE

AI assists. Humans remain accountable.

Confidence routing

High confidence auto-proceeds. Low confidence triggers review.

Challenge workflows

Any stakeholder can challenge. Dissent is recorded.

Immutable audit trail

Every decision logged. Optional blockchain anchoring.

Fail-closed operations

Normal → Degraded → Paused → Stopped.
